DETAILED ACTION

Allowable Subject Matter

1. Claims 1-23 are allowed.
2. The following is an examiner's statement of reasons for allowance: none of the prior art, alone or in combination teaches or suggests a method or system for reducing inter element crosstalk in a transmit or receive mode by at least the steps or structures for generating or receiving a first waveform/signal for a first element wherein the first waveform/signal having a first component operable to reduce crosstalk from a second waveform/signal at a second element; applying the first waveform/signal to the first element; and substantially simultaneously with the previous step (applying the first waveform/signal to the first element), applying the second waveform/signal to the second element. The closest reference to Haider (US 6,135,963) teaches a coherent imaging system having plurality of channels and a phased array of transmit elements that provides for transmit apodization (or weighting) by controlling pulse width of the transmit pulses on each channel but fails to teach the specific steps or structures for reducing crosstalk between first and second elements.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure (please see attached "Notice of References Cited").
